APPL-NO: 08/087,924 DATE FILED: Jul. 6, 1993

SUMMARY:

BSUM(5)

Broadcast **distribution** of **software**, particularly **software** designed for personal computers, has introduced several problems of access and distribution control. For purposes of this discussion, the term "distribution" means **distributing** a large number of different **software** titles to a large number of potential customers without the ability to deliver different copies to each user. In addition to the usual mode of transmitting software on floppy diskettes, software may readily be **transmitted** via **radio** frequency public broadcast or computer network, each medium having the same problem of controlling access to the software thus transmitted.
